-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 27 November 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

1. Claims 1-12 are presented for examination.
2. It is noted that although the present application does contain line numbers in the claims, the line numbers in the claims do not correspond to the preferred format. The preferred format is to number each line of every claim, with each claim beginning with line 1. For ease of reference by both the Examiner and Applicant, all future correspondence should include the recommended line numbering.
3. The drawings are objected to because each elements in the drawing is not label. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Kopetz is cited in the IDS.
6. **Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Kopetz, US Patent no. 6,145,008.**

Art Unit: 2182

7. In re claim 1, Kopetz shows a CANopen network [col 3, line 2] including a bus master [col 3, line 38] and an I/O module [I/Adr11, 402, fig 5; O/Adr21, 403, fig 5], each communicatively coupled to a common bus [300, fig 4], wherein the I/O module is subject to a state change [col 4, lines 13-55], a method of permitting the bus master to collect state information from the I/O module [col 3, lines 36-38], the method comprising:

determining if the bus master is prepared to receive further data from the bus [col 3, lines 38-46];

sending a trigger signal from the bus master to the I/O module if the bus master is prepared to receive further data from the bus [col 3, lines 47-50]; and

sending a state signal from the I/O module to the bus master in response to the trigger signal [col 3, lines 54-56].

8. In re claim 2, Kopetz shows a plurality of I/O modules [402, 403 in fig 5], each communicatively coupled to the common bus, wherein each of the I/O modules is subject to a state change [col 4, lines 13-55], the method comprising:

determining if the bus master is prepared to receive further data from the bus [col 3, lines 38-46];

sending a trigger signal from the bus master to a selected one of the I/O modules if the bus master is prepared to receive further data from the bus [col 3, lines 47-50];  
and

sending a state signal from the selected I/O module to the bus master in response to the trigger signal [col 3, lines 54-46].

Art Unit: 2182

9. In re claim 3, Kopetz shows configuring a plurality of the I/O modules as a group [402, 403 in fig 5];

determining if the bus master is prepared to receive further data from the bus [col 3, lines 38-46];

sending a trigger signal from the bus master to a selected group of the I/O modules if the bus master is prepared to receive further data from the bus [col 3, lines 47-50]; and

sending a state signal from each I/O module of the selected group of I/O modules to the bus master in response to the trigger signal [col 3, lines 54-56].

10. In re claim 4, Kopetz shows the group of I/O modules is less than the total plurality of I/O modules [fig 5].

11. Claims 5-12 are rejected under the same rationale as discussed above in claims 1-4.

Art Unit: 2182
